### **ACADEMIC PROJECT DETAILS:**

- Project Name: Image Encryption System Using 3D Chaotic Maps
- In this project, Chaos based technique using two 3DChaotic maps is presented for encrypting the images and enhancing the security. An unpredictable sequence is generated with two chaotic maps namely 3DLogistic and 3DHenon map. The generated sequence is used to perform multipoint crossover and change the intensity values of pixel with initial conditions for two 3Dmaps will be key in encryption and decryption process. The Result analysis done using histogram and correlation coefficient shows that for encrypted image pixel values for each RGB Components are uniformly distributed across the image and correlation coefficient among the adjacent pixel is very low. The result shows that the system implemented provides secure model for encryption and decryption process.

### **INTERNSHIP DETAILS:**

- Internship Name: Bank Management System, at Tribit Technology.
- Duration: 10/01/2020 to 05/03/2020

### **NON-ACADEMIC ACHIEVEMENTS:**

- Won several prizes in cultural activities at school level.
- Won prizes in sports at school level.
